

Term Paper Guidelines

For this project you need to review at least 4 papers related to one of the following topics:

- Software Architecture and Product Lines for Mobile Applications
- Product Component Variability
- Feature assembly and component generators
- The use of Generative Programming in SPL
- Family-based software development
- Evolution in Software Product Lines
- Aspect-oriented and Component Adaptation for SPL
- Criteria of the Software Product Line decomposition
- The use of Model-Driven Architecture and Transformation in SPL

Your review shall be composed of roughly 2500-5000 words. You shall use MS-Word for your writing and final submission.

In your review, define the problem clearly in the introductory remarks, And then have a comparative analysis between the different approaches that you review.

You can use any "refereed" references available on the Internet, or the library.

Make your main source of technical references to be:

- www.acm.org
 - Conferences
 - Journals
 - Magazine
- www.computer.org
 - Conferences
 - Journals
 - Magazine

Your review paper shall have the following structure:

Title

Introduction

----- (300-1000 words)

Discussion of relevant topics

----- (2000-3700 words)

Conclusion

----- (200-300 words)

References

4 references
